Victoria Logistic

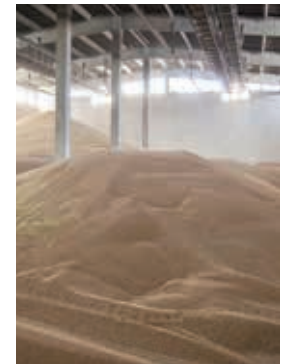

FOR A CLEAR
VISION OF
BUSINESS

Victoria Logistic

Victoria Logistic was founded in 2008 as a member of the Victoria Group business system, and it deals with the organization of primary production of oilseeds and grains, the distribution of input materials, trade, transport and storage.

Victoria Logistic is a market leader in the purchase of oilseeds and represents a link between agricultural producers and processors. As much as 500,000 tons of soybean, sunflower, and rapeseed is purchased for the factories Victoriaoil and Sojaprotein, member companies of Victoria Group. The purchase is performed at 100 locations for each crop, with daily receipt capacity of over 10,000 tons. The company has a total storage capacity of up to 450,000 tons of mercantile seed at its disposal, including space for storing 100,000 tons of fertilizer. The total volume of transport exceeds 1,000,000 tons per year.

In these processes, the logistics and storage sectors of Victoria Logistic are responsible for the preservation of the quality and quantity of goods. The aim is to preserve the purchased goods without any losses in a cost effective way.

Victoria Logistic

FOR
OUR
LAND

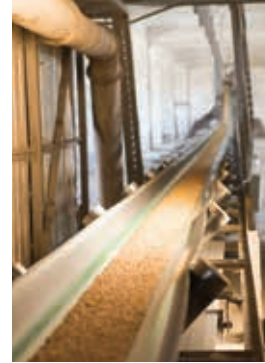

Victoria Logistic constantly monitors the market and develops its services, capacities, and infrastructure accordingly, and in that way stimulates the growth and value of its own business and the business of its partners.

Such business orientation is the foundation for a successful long-term cooperation with over 300 cooperatives and 40,000 domestic agricultural producers of soybean, sunflower, rapeseed, wheat and corn. At the same time, it is a great recommendation for developing cooperation with agricultural producers in neighboring countries.

Victoria Logistic offers its partners a comprehensive package of services - from sowing, crop monitoring, harvesting, organizing logistics, and defining product quality, to storing goods and selling them to the company or to third parties.

Before the beginning of agricultural production, Victoria Logistic supports agricultural producers with significant financial resources and a selection of top quality seeds, pesticides, and mineral fertilizers. In that way, the company provides them with support for achieving high quality crops, a good yield, and a stable income.

The best partner for the best results in agriculture and even better agricultural years to come.

Victoria Logistic

FOR GOOD
RESULTS

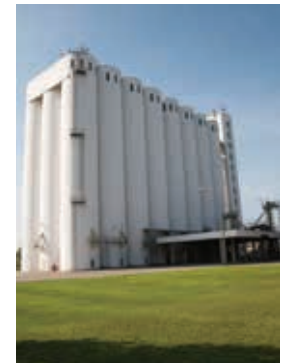

Documented traceability of agricultural products is becoming a requirement for their further placement and quality assurance. The market is becoming increasingly aware of the importance of implementing standards which give the product additional value and increase its competitiveness on the domestic and foreign markets.

Victoria Logistic is continuously monitoring current standardization trends. By introducing the ISCC standard, Victoria Logistic is providing certified raw materials for Victoriaoil and Sojaprotein, which are already certified as producers. Victoria Logistic and Sojaprotein have implemented another very important European standard - the Danube Soya.

Victoria Logistics also deals with the purchase of biomass (soybean, wheat, barley, and corn straw). Since July 2016, the services and products portfolio has been expanded with a new package of services which includes storing, packaging and port services for mercantile goods and fertilizers at one location, in the AgroPort center in Backa Palanka.

With the aim of creating conditions for providing the highest quality in every segment of purchasing and storing goods, the company has invested over €20 million into infrastructure and technology since its foundation, and another €10 million into additional storage locations and equipment.

Victoria Logistic

FOR A
RESPONSIBLE
AGRICULTURAL
PRACTICE

A combine harvester is shown in a field, discharging a large amount of grain into two red trailers. The grain is piled high in the trailers. The harvester has a long auger extending from the top. The background shows a vast field of crops under a clear sky.

The Expert Service of Victoria Logistic was founded with the aim of improving plant production of our business partners. With its activities and the implementation of the vision of "precise agriculture", the Expert Service creates preconditions for successful production, and provides producers with multiple benefits through: soil analysis, crop monitoring, and consulting. A timely reaction following an expert recommendation has a direct influence on the increase and quality of the yield. The Expert Service closely cooperates with the quality control sector - they jointly monitor and evaluate the quality of plant crops.

In today's business environment, having accurate and timely information is essential for making the right decisions. That is why we provide our partners with the latest agricultural information and expert advice on the works in the field via company's website www.victorialogistic.rs, whereby a call center is available for answering additional questions, every day free of charge at 0800 333 330.

We are a responsible company supporting and working together with the agricultural community with the aim of creating value for all participants in the supply chain.

*Our strength lies in knowledge,
expertise and long-term
partnerships with those who
recognize our path and share
our vision.*
